

INCHALL x Ingenious Summer Camp 2024

By Suwichak Sattayarak

The Ingenious Summer Camp is a training camp that focuses on providing knowledge in the field of Industrial Engineering, particularly on green technology and sustainable energy. The camp aims to raise awareness about global warming and sustainable solutions. Throughout the camp, we learn various methods that can be applied to industries to help reduce environmental impacts. Not only do we gain theoretical knowledge, but there are also activities that develop our teamwork skills, especially working with peers from different countries. This allows us to exchange experiences and opinions, as well as build new friendships, exchange contacts, and share ideas that can be effectively developed in the future.

The image shown here is from a visit to the **Petro Kimia Gresik** factory, a very large plant that produces chemical products such as fertilizers. The factory also gave us a challenging project related to production to work on, and we had to compete against other teams, all of whom were highly skilled. Listening to the presentations from international peers allowed us to see their ideas, as well as how they created engaging and informative slides. Everyone was incredibly talented and their presentations were full of substance.

The group of friends who won the championship were extremely talented. On the second day of the camp, I had the chance to sit next to one of them. His name is Roren, and he's from the Philippines. Roren's group was very well-prepared, and I paid close attention to his presentation on the final competition day. Their ideas were outstanding, especially from an Industrial Engineering perspective.

In terms of laboratory activities, there are lab sessions in various subjects, such as production planning, ergonomics, and station management. These sessions include competitive scoring and provide both knowledge and hands-on experience, making them very enjoyable activities.

Additionally, the training program included a trip to explore the old town of Surabaya, Indonesia, where we enjoyed delicious lamb satay and even had Thai tea in Indonesia. It was a great activity for strengthening relationships with international friends, and we took many photos with them.

On the last day, the morning was filled with recreational activities and games with international friends, which was the best time for getting to know each other. We were divided into teams, and I had the chance to connect with many new friends. In the evening, we had a prom night where everyone dressed in traditional attire, looking beautiful and handsome. There was also a cultural dance activity, with each person performing dances from their own heritage.

Finally, I would like to thank Tya and Kira for taking us out to eat and showing us around, as well as for their support and guidance throughout our work. They took excellent care of our team from Thailand. I still keep in touch with them to this day. I'm also grateful for such wonderful activities that allowed me to make new friends.
