

NITROGEN CAPTURE FERTILIZER

Plasma Activated Water

PAW TREATMENT

PLASMA CAPTURE

PLANT WITH PAW

Feature

Producing urea and nitrogen fertilizer using plasma activated water (PAW) to capture plenty of nitrogen and oxygen in the air. High voltage applied gives urea or nitrate fertilizer.

Productivity

Plasma activated water (PAW) technology helps to increase agricultural productivity.

Opportunity

Great opportunity for becoming the food hub of the region with low-cost fertilizer production.
